Lightguide Simulator

An Important Tool for Monitoring Spot-Cure System Performance

Functions

- Allows a direct lamp output reading
- Provides fast and accurate intensity readings
- Helps in determining bulb and lightguide replacement timing
- Helps increase productivity of UV-curing spot lamps

In a UV spot-curing system, both the lamp and the lightguide degrade with use. Lamps begin to emit less energy and the transmission efficiency of lightguides also decreases over time, requiring periodic replacement of both. The degradation of lamps and lightguides varies with usage and must be measured. Measuring the output from a lightguide shows both the lamp degradation and the lightguide transmission loss, without regard to their relative contributions. A lightguide simulator allows the measurement of the lamp output intensity independent of the lightguide. The difference between these two measurements is the transmission rate of the lightguide. A lightguide simulator is a cost-effective tool that helps accurately identify lamp and lightguide replacements.

Using a Lightguide Simulator

- T** Measured Combined Intensity: Measured from end of lightguide. Replace lamp and/or lightguide when intensity drops below that validated for the process.
- B** Measured Lamp Intensity: Measured through lightguide simulator.
- T/B** Calculated Lightguide Transmission (%): Calculated transmission rate for a new, single-pole, 5-mm lightguide is 90% or more. Lower transmission rates require more frequent lamp replacement to maintain output intensity.

Specifications

Specifications	
Part Number	38408
Compatibility	Compatible with the following spot lamp models: Dymax BlueWave® 200, BlueWave® 75, BlueWave® LED Prime UVA, BlueWave® DX-1000 (in spot-cure configuration)
Construction	5-mm diameter fused silica rod, optically insulated and sealed on both ends
Light Transmission	Minimum 91% in the UVA and VIS wavelength range

Please note that most curing system applications are unique. Dymax does not warrant the fitness of the product for the intended application. Any warranty applicable to the product, its application and use is strictly limited to that contained in Dymax's standard Conditions of Sale. Dymax recommends that any intended application be evaluated and tested by the user to insure that desired performance criteria are satisfied. Dymax is willing to assist users in their performance testing and evaluation by offering equipment trial rental and leasing programs to assist in such testing and evaluations.
